

SECURITY ESTATE MANAGEMENT

The Security Estate Management service includes asset discovery and vulnerability testing through a range of tailored, automated, penetration testing methods.

The service can rapidly identify, evaluate and classify critical vulnerabilities at the network, systems and applications level, whilst providing compliance with corporate risk and security policies.

SECURITY HARDWARE DEVICES

All security hardware can be maintained and configured by the company. Patch management of these devices is provided as part of the service, ensuring they are protected against the latest threats.

To achieve complete security, we work with you to identify weakness, mitigate them, and proactively deter repeat threats. The company has access to the latest attack and threat data, and is able to incorporate this information quickly, responsively and globally.

BUSINESS GOALS

- Policy enforcement
- Evidenced compliance
- Maximised investment
- Increased service availability
- Improved supply chain management

BENEFITS

The company's services lay the foundations for embedding security and resilience across the enterprise, adding to effective business continuity and disaster recovery capability.

Our service design encourages standardisation, interoperability, scalability, technology consolidation, supportability, solution reuse and value for money.

Customers are provided access to security experts across many domains and capabilities from ICT, to core infrastructure industries and across the spectrum of corporate software.

ESTATE MANAGEMENT

SECURITY OPERATIONS CENTRES AND OPERATIONS

Our Security Operations Centres (SOCs) provide a flexible and comprehensive set of management and monitoring services that can be quickly tailored around an organisations' specific needs. Security services offer efficient, around-the-clock perimeter and internal security with real-time monitoring, device maintenance, event correlation, and analysis of the customer's infrastructure and critical applications to ensure the cyber threat is pro-actively managed and attacks are mitigated.
