

Brewster, NY – June, 17th June 2014

Finmeccanica - Selex ES establishes significant presence at Realcomm and IBcon conferences

Finmeccanica - Selex ES announces plans to exhibit at the combined Realcomm 2014 and IBcon 2014 conferences in Las Vegas, Nevada, June 18-19, as a platinum sponsor, in booth #501. The global technology company will be promoting its groundbreaking software, DiBOSS™, a next-generation digital building operating system solution that optimizes energy performance to save money and increase building system reliability and security without sacrificing tenant comfort.

Along with partners from Rudin Management Company and Columbia University, Finmeccanica - Selex ES will host a comprehensive stand in the exhibit hall with live demonstrations of the operating system, present case study posters during the general session smart building showcase and add expertise to three panel sessions: Smart Buildings – Understanding the New Building Infrastructure; Advanced Building ANALYTICS - From Data to Information to Action; and A Comprehensive STRATEGY: Operations + Energy + Sustainability + Experience = Profitability.

Since its launch at the same conferences last summer, DiBOSS has gained the attention of facility owners and managers with its proven ability to save significant energy costs. DiBOSS is the first true operating system platform for this industry. The system can actually learn the optimized performance of a building, allowing it to then identify deviations which can indicate faults or inefficiencies in behavior. Engineers then have a chance to correct issues before tenants are negatively affected. In addition to the predictive analysis information, DiBOSS offers other advantages that set it apart from traditional building management systems: it tracks occupancy and it shares data with tenants who use it to affect their own energy consumption and costs savings. Tenants in Di-BOSS buildings experience better energy efficiency, safety and comfort.

Realcomm and IBcon attract facility managers and decision makers directly involved in the purchase of 'smart building' technologies. Finmeccanica - Selex ES is proud to help sponsor the conferences and to demonstrate the new levels of energy optimization, safety and comfort DiBOSS brings to an industry in need increased sustainability.
