

Main environmental data and information in 2019

ENERGY CONSUMPTION BY SOURCE 5,836 TJ

ENERGY FROM RENEWABLE SOURCES (% on total energy consumption)

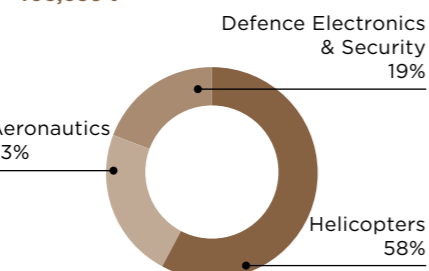

- Energy consumption equal to 5,836 TJ in 2019, up by 6% on 2018.
- Natural gas is the main source of energy, making up 49% of the total.
- 83% of electrical energy was procured from renewable sources²⁷ (99.6% for Italian sites).

CO₂e EMISSIONS Scope I, II*, III 685,337 t

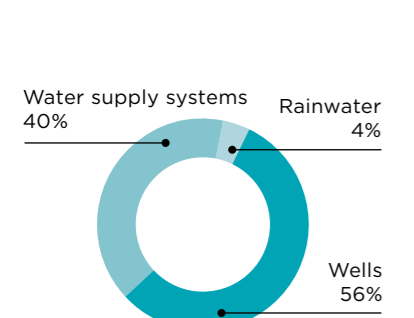

CO₂e EMISSIONS BY SECTORS Scope I e II*

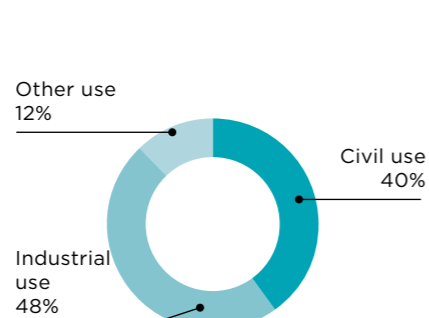

- Total CO₂e emissions, equal to 685,337 t in 2019, increased by 3% on 2018.
- In particular, Scope I emissions amount to 332,780 t of CO₂e (+16% on 2018), Scope II emissions, calculated using the market-based²⁸ method, amount to 70,856 t of CO₂e (+9% on 2018) and Scope III emissions amount to 281,701 t of CO₂e (-9% on 2018).²⁹

*Market-based.

WATER WITHDRAWALS BY SOURCE 5,887 thousands of m³

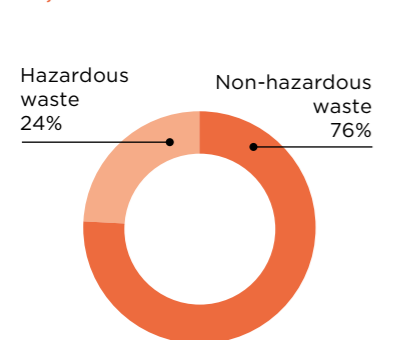

WATER USE 5,531 thousands of m³

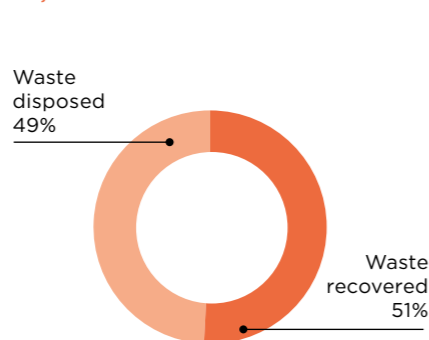

- Water withdrawals, equal to approximately 5.9 million m³ in 2019, increased by 1% compared to 2018.
- Almost all wastewater goes to public sewers (93%), 6% is discharged in surface waterways, in compliance with the regulatory provisions, and the remaining 1% is disposed of in other ways.

WASTE PRODUCED 38,499 t

WASTE BY DISPOSAL METHOD 38,499 t

- Waste produced, equal to 38,499 t in 2019, increased by 13% on 2018 for extraordinary activities.
- 24% is classified as hazardous and 76% as non-hazardous.
- 51% of waste produced is sent for recovery (of which 35.4% is recovered, 13.5% is recycled and 0.8% is composted).

²⁷ Covered by Guarantees of Origin.

²⁸ The market-based method attributes a conversion factor equal to zero to energy consumption from renewable sources.

²⁹ Scope III emissions include the following categories: purchase of goods and services; activities related to the production of fuel and energy not included in Scope I and II; upstream transport and distribution; waste generated by operations; transfers; leased goods.

Performance 2017-2019

ENERGY CONSUMPTION INTENSITY (MJ/€)

Energy consumption intensity - as a percentage of revenues - in 2019 was 0.42, decreasing by 6% on 2018.

SCOPE I AND II CO₂e EMISSION INTENSITY (g CO₂e/€)

CO₂e emission intensity - as the ratio of the sum of Scope I and II (market-based) emissions to revenue - in 2019 was 29.28, slowly increasing by 2% on 2018. The increase of CO₂e emissions, both in absolute value and reported on revenues (intensity), is mainly due to greater production compared to last year and use of gaseous substances in the helicopters sector.

WATER WITHDRAWAL INTENSITY (l/€)

Water withdrawal intensity - as a percentage of revenues - in 2019 was 0.43, decreasing by 10% on 2018.

WASTE PRODUCED INTENSITY (g/€)

Waste intensity - as a percentage of revenues - in 2019, was 2.79, with a little increase by 1% on 2018.
