4.2 Definitions

Article: raw material, process, tool, gauge, equipment, detail part, sub-assembly, assembly, avionics equipment, software, CAD/CAM/CATIA media (including Digital Data Definition), documentation, aircraft, airborne/non-airborne equipment and service that may be provided.

Authoritative Data: Undisputed source of LH approved Design and associated data used for Product manufacture and Quality Assurance acceptance without any form of change, subject to access control and configuration management by the Supplier.
**CATIA V5:** Computer Aided Three-Dimensional Interactive Application, Product of Dassault Systems, V5: CATIA Version #5

**Critical Part:** an article which failure *could* have a catastrophic effect upon the product and for which the identified critical characteristics *shall* be controlled to ensure the required level of integrity (see table 2 of QRS-01 for critical part classification).

**Defined Tolerance:** A Design tolerance defined by LH, see Explicit Dimension.

**Design Data Set:** Set of digital data which completely defines a part or assembly and is used to transfer this information to other users (Manufacturing, Quality, Suppliers, Maintainers, Customers). A DDS includes, but is not limited to, Part lists, Bill of Material, Design notes, exact 3D geometry and a minimum number of 2D drawings, documents, data files, etc. 3D models and 2D drawings are in CATIA V5 format.

**Dimensional Inspection Plan:** A plan describing inspection requirements extracted from the DDS.

**Explicit Dimension:** A dimension and tolerance embedded in the Design Data Set in the form of a 3D annotation or 2D dimension and explicitly displayed on the 3D model or 2D view.

**Feature:** A Design attribute or characteristic that includes physical hardware such as a surface, face, edge, radius, hole, tab, slot, pin etc and requirements such as Non-Destructive Inspection and Interchangeability. All features require validation to certify the Product to the Design Authority. All features have associated notes and / or Geometric Dimensioning / Tolerancing.

**LH Native CATIA:** LH DDS transferred to a Supplier without being subject to amendment, corruption or interpretation.

**Implicit Dimension**

The dimensional value of a geometrical feature on the Design Data Set, DDS, that is not displayed on the 3D model or 2D view. The dimension is defined by extracting the digital CAD geometry using the CATIA toolset. The applicable tolerance is called-up in the associated Design notes.

**Lower End Viewer:** An entry level, visualization system (e.g. Enovia 3D com) used to view DDS with associated data as defined by LH.

**Non-Disclosure Agreement:** LH Agreement formally in place with a Supplier applicable to all types of LH proprietary information, e.g. designs, documentation, procedures, specifications, methodologies and data.

**Pre-Release:** Available for use under controlled conditions prior to being formally released (Pre-Released).

**Non Released Data:** Available for use under controlled conditions prior to being Pre-Release status.
Sealed Data Plan: Sealed Data Plan produced by the Supplier to demonstrate compliance to QRS100.

Sealed Data Transfer: A term used to describe the movement, transfer, validation and storage of data transferred to a LH Supplier for which the integrity of the data is sealed and therefore no change or conversion is permitted.

5 Requirements

5.1 Introduction

QRS-100 defines the minimum requirements for a Supplier to receive, manufacture and certify compliance to, a DDS as opposed to traditional 2D drawings. For an overview of the process refer to Appendix 1.

The requirements and processes contained within this document are aligned to DMFG principles and methodologies, focussed upon operating high efficiency levels achieved from:

- Design for manufacture: Creating the opportunity for the Supplier to contribute to the Design content in order to introduce manufacturability prior to Design release.
- One-part-one-model: Single source control simplifying electronic distribution, tracking and configuration management of DDSs.
- Prioritising upon minimal 2D content within the DDS
- 3D models defined with Implicit Tolerances, Geometrical Dimensioning & Tolerancing principles and Design Notes.
- Operating from LH DMFG Methodologies: LH have released DMFG methodologies applicable to both General and specific Technology /Commodity Type rules.
- Sealed Data Transfer: Technically retaining the content and Design intent of the LH Design.
- Dimensional Inspection Planning, DIP: The creation of a DIP by securely extracting geometry for manufacturing and inspection purposes including Explicit dimensions, Implicit dimensions and Design Notes.
- Version Control and Setup of CATIA V5: There is a need for the Supplier to operate the version of CATIA V5 specified by LH and configure the corresponding setup.

5.2 Supplier Selection and Capability Classification

5.2.1 Supplier Selection

Suppliers may be selected on the basis of the applicable DMFG capability, related to:

- Data Input from LH
- Data Output to LH
- Tools Used
- Methodologies
• Integration of LH DMFG Environment

The three levels of capability progressively leading to High are:

<table>
<thead>
<tr>
<th>#</th>
<th>DMFG CAPABILITY</th>
<th>SCOPE OF APPROVAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>High</td>
<td>DMF-000</td>
</tr>
<tr>
<td>2</td>
<td>Medium</td>
<td>DMF-001</td>
</tr>
<tr>
<td>3</td>
<td>Low</td>
<td>DMF-002</td>
</tr>
</tbody>
</table>

5.2.2 Supplier’s DMFG Capability Classification

As defined by the Supplier’s SDP:

**High**: The Supplier complies with QRS-100 with respect to:

- Full integration with the DMFG environment exchanging LH DMFG native DDS.
- Operating CATIA V5 configured in accordance with the specified DMFG hardware and software requirements.
- Operating applicable DMFG methodologies in full 3D.
- Producing FAI Plans and Dimensional Inspection Plans from the LH native DDS.

In this case the Supplier operates as a client within both the LH system and LH DMFG environment.

**Medium**: The Supplier complies with QRS-100 with respect to:

- Exchanging LH DMFG native DDS. (Through SWIP Supplier portal or FTP Sites)
- Operating CATIA V5 configured in accordance with the specified DMFG hardware and software requirements.
- Operating applicable DMFG methodologies in 3D and 2D.
- Producing FAI plans and Dimensional Inspection Plans from the LH native DDS.

As an example in this case, the Supplier would have the minimum number of workstations to generate Process Plans, Work instructions and Tool Designs in 3D CATIA V5 and transfer models to LH e.g. of tooling designed by the Supplier in support of LH manufacture.

**Low**: The Supplier complies with QRS-100 with respect to:

- Only receiving LH native DDS. (Through SWIP Supplier portal or FTP Sites)
- Unable to resend DMFG data to LH in 3D Format when applicable.
- Operating applicable DMFG methodologies in 3D and 2D.
• Producing FAI plans and Dimensional Inspection Plans from the LH native DDS.

As an example in this case, the Supplier has a limited number of CATIA V5 workstations restricted to reading the LH DDS and preparing Dimensional Inspection Plans. For all remaining purposes and applications, the Supplier operates an alternative CAD/CAM system(s).

Note: For suppliers authorized to the SWIP Supplier portal, its use is mandatory. The FTP site is still allowed as interim solution for supplier still not authorized to the SWIP Supplier portal.

Refer to Appendix 2 for the schematic representing Sealed Data Transfer.

5.2.3 Data Output to LH

When a Supplier is invited by LH to contribute to an evolving Design, one or a combination of methods may be used by the Supplier to remotely view the current LH design to provide feedback, using for example:

• WebEx
• ReplyWeb
• Low End Viewer at the Supplier
• Direct access to the LH concurrent environment
• Data exchange via FTP sites/SWIP Supplier portal

In some cases, the Supplier may be invited to route 3D data to LH. For example, the routing of tool designs generated by the Supplier in support of LH manufacture, DIP to be validated, etc.

In these cases the data must be exchange only through FTP sites/SWIP Supplier Portal.

5.2.4 Requirements for the Supplier’s Information System Tools

• DMFG Environment Configuration for External Suppliers, AWDMFG021.

The Supplier shall operate and maintain the version of CATIA stipulated in AWDMFG021, aligned with last revision published by LH, to achieve technical compatibility with LH with minimum effort and maximum confidence.

In addition, the Supplier shall configure their CATIAV5 default settings using software provided by LH as called-up by AWDMFG021.

• For any changes to AWDMFG021 and/or the Supplier’s CAD system, the Supplier shall revise and submit their SDP to LH for re-approval quoting changes to their hardware and software configuration.
• For the requirements appertaining to Suppliers transferring DDS to their lower tier Suppliers, refer to paragraph 6.4.
For data exchange through SWIP portal there are no additional requirements regarding the operating system. To access the portal the requirements are an internet connection with the Internet Explorer 7 browser or better, alternatively Firefox 5 or better.

Note: The SWIP portal using the following technologies:
- Microsoft .NET Framework 4.0 Client Profile
- Windows Presentation Foundation (WPF)
- Windows Communication Foundation (WCF)

These module are normally included in the basically installation of the operating system

5.3 Supplier Methodologies

If not already done-so, the Supplier is required to generate processes and procedures demonstrating compliance to QRS-100. These procedures shall be referenced in a dedicated DMFG Sealed Data Plan and LH SQA shall approve this document ideally prior to the commencement of manufacture.

Manufacture may commence in advance of approval with the written authority of LH i.e. in accordance with a documented and time-bound closure plan leading to the minimum approval Classification.

5.4 Content of the Supplier’s DMFG Sealed Data Plan, SDP

Refer to Appendix 3 for a summary of the SDP contents.

- For the management of LH DDSs the Supplier shall map their Processes for DDS receipt, storage, and validation with a representation of associated Manufacturing Engineering, Production and Inspection DDS processes.
- The Supplier shall document within their SDP their hardware and software, with each revision status as applicable, required to maintain synchronisation with LH Sealed Data Transfer in accordance with AWDMFG021.
  This shall include:
  - CAD packages and any additional computing equipment receiving Authoritative Data.
  - The method of accessing and processing DDSs by each function of the Organisation.
  - The revision numbers of AWDMFG021 and the associated setup software provided by LH.
- The Supplier’s SDP shall reference any existing DMFG / DDS procedures compliant to QRS100 or alternatively directly call-up new QRS100 procedures for e.g.:
  - Manufacturing Engineering
  - Configuration Management, see para 8
  - Inspection Planning
  - The use of LH native CATIA for Inspection purposes.
First Article Inspection  
Steady state batch Inspection  
DMFG Training.

- The SDP *shall* identify compliance with DMFG methodologies applicable to the Supplier’s technology type. Refer to Appendix 3.

Applicable methodologies *shall* either be provided directly to the Supplier by Procurement, or the Supplier *shall* have access via the Portal to the LH Methodology Applicability Matrix in addition to the applicable methodologies.

To control this requirement, the Supplier *shall* create their own Application Matrix defining the methodologies applicable to their business and identify their method of receiving or accessing the methodologies subject to the LH Non Disclosure Agreement, NDA.

For initial and any change of technology type, the Supplier *shall* maintain continuous access to updates and ensure the methodologies are understood and flowed-out to all affected functions for compliance purposes.

- When there is an intention for a 1st tier Supplier to LH to second stage sub contract the LH DDS to a lower-tier Supplier in furtherance of a LH DMFG Purchase Order, the 1st tier Supplier *shall* be responsible for:
  - Ensuring all lower-tier Suppliers are approved by LH to QRS01, with DMFG scope of approval, prior to any order being placed.
  - Informing LH of the Informing LH of the intent to use a new lower tier Supplier for DMFG purposes and listing the lower tier Supplier in their DMFG SDP recording the version of CATIA to be used.
  - Ensuring DDS transfer to the lower tier Supplier does not take place in circumstances stipulated by LH when applicable.
  - Ensuring all low-tier Suppliers, not with low level of 1st tier DMFG approval supplier, are approved by LH for DMFG Purposes

- The Supplier *shall* provide prior notification to LH of any change that directly affects the approved content of the SDP. Similarly, the Supplier *shall* update their SDP against any up-issues of QRS-100, or on the specific request of LH and resubmit their SDP to LH for approval.

- The Supplier *shall* conduct an Internal Audit of the DMFG SDP at the commencement of manufacture, followed by periodic audits at maximum intervals of 6 months to ensure continued compliance and effectiveness.

- Results of all Internal Audits *shall* be documented and maintained for review by LH. The Supplier *shall* increase the frequency of audits following the discovery of any adverse findings or at the request of LH.

### 5.5 Configuration Management and Data Security

Throughout the manufacturing process the Supplier *shall* maintain the correct configuration of the Product Baseline and maintain traceability of each Product back to the LH Sealed Data Transfer and all associated DDS elements.
The following controls within the Supplier’s SDP shall apply:

- The Supplier shall configure and trace the physical Product, In Process Models, Manufacturing Engineering and Inspection Planning back to the original LH DDS and associated specifications, data, procedures and DMFG methodologies as listed in the SDP DMFG applicability matrix.
- Ensure any use of non-released DDSs are correctly authorised by LH and identified/controlled in accordance with para 5.6
- Record the version number of the LH CATIA DDS.
- Any DDS transferred from LH identified as “REFERENCE ONLY” shall not be used for Production purposes.
- Product compliance to the LH Sealed Data Transfer shall be underwritten by, and traceable to, the FAIR in accordance with QRS-01.
- Ensure a record of all data and DDS transmittals, to and from LH, is traceable to the Supplier’s CAD software and authorised Users.
- Document in the Supplier’s SDP specific validation processes for any exchange, translation or conversion of the original LH DDS, i.e. solely for manufacturing purposes, to ensure the original Design intent is retained with no risk of change or data corruption. Refer to Appendix 3.
- Maintain secure storage of LH Sealed Data Transfer, LH methodologies and the Supplier’s own CAD/CAM models. Access shall be controlled and restricted to authorised personnel taking into account the Non Disclosure Agreement imposed by LH.
- Establish and maintain a secure data backup system and Disaster Recovery Process.

5.6 LH Design Maturity

The Supplier is authorised to manufacture and dispatch Products traceable to fully released LH DDS provided by LH, i.e. at the ‘100%’ maturity status of RELEASED ‘R’.

The maturity status of DDS is available in the Part List document.

Controlled exceptions may take place only when LH explicitly authorise the manufacture from a Design prior to release for a specified purpose. LH controls shall take into account any restrictions imposed by the current Maturity status.

When applicable, prior to LH Design release the following shall apply to the receipt and control of a DDS at the Supplier:

- Products shall be securely and temporarily identified as ‘non-conforming’ and segregated accordingly.
- The Supplier’s Configuration Management system shall provide traceability to the LH Purchase Order with any corresponding LH manufacturing instructions and restrictions.
- All manufacturing instructions and restrictions imposed by LH shall be invoked.
- Parts manufactured from ‘pre-release’ or ‘non-released’ DDS can only be dispatched to LH under the authorisation and controls imposed by LH through Purchase Order.
The Certificate of Conformity shall clearly report the statement “Part manufactured under non-released design data”

5.7 Dimensional Inspection Plan

With respect to annotations or ‘dimensioning’ of Explicit dimensions created by the LH Designer:

- By definition, features subject to a Defined Tolerance shall have the dimension and tolerance annotated by LH Design on the specific feature of the DDS. i.e. ‘Explicit’ Dimensions.
- A dimension and tolerance not explicitly annotated on a feature by LH Design is termed an ‘Implicit Dimension’.
- Refer to methodology AWDMFG002 Dimensioning and Tolerancing Principle Rules and Guidelines for information relating to General Tolerancing as applied to profiles. This methodology is in addition to the Engineering Standard called-up by the Design, e.g. ASME Y14.5M, ASME Y14-41.

Hence the Supplier is required to produce a Dimensional Inspection Plan, DIP, to enable the Product definition in it’s entirety to be inspected and certified. The DIP shall consist of all Explicit dimensions annotated on the LH Design plus any additional Implicit dimensions required by the Supplier for Manufacturing and Inspection purposes.

The Explicit and Implicit dimensions and Design Notes shall be extracted from the LH DDS for Manufacturing and Inspection purposes using the standard CATIA toolset. In all cases there shall be no form of interpretation or change of definition.

Any emerging anomalies shall be formally raised with LH with a record of close-out including traceability to the LH response.

The retention of 3D definitions via electronic work instructions is encouraged by LH for DIPs.

- The DIP shall identify all of the features, dimensions/tolerances annotated by LH Design on the DDS plus any additional features not annotated, e.g. Implicit dimensions, required to retain and verify the Design intent for Manufacturing and Inspection purposes. For completeness, the DIP shall include all Design notes.
- The DIP shall be directly traceable to the original LH native CATIA DDS.
- The dimensional inspection requirements and Design Notes shall be extracted from the original LH DDS by competent personal trained in CATIA V5 using the standard CATIA toolset without interpretation or change.
- Any resulting queries shall be formally recorded and resolved directly with LH.
- FAIR and batch inspection results shall be traceable to the requirements of the DIP. For example, CMM programming, CMM reports and Bench Inspection requirements shall originate from the DIP.
- The DIP shall be subject to independent approval by the Supplier’s Quality Organisation. This role may be delegated by Quality, in accordance with the
Supplier’s governing Procedures, to a competently trained position within the Organisation, e.g. within Manufacturing Engineering.

- It is essential to use LH native CATIA throughout, in particular for CMM inspection purposes.
- FAIR requirements in QRS-01 shall apply. The DIP shall be quoted in the FAIR as the document required for subsequent steady state batch inspection clearance.

The actual dimensions of the Product shall be recorded in the usual manner in the FAIR, but need not be recorded in the DIP for batch Production unless required by another process.

5.8 Technical Problem Reporting and Corrective Action

- The Supplier shall ensure any irregular or non-conforming Sealed Data Transfers are formally identified to LH as being discrepant, quarantined from use and reviewed for disposition.
- The Supplier shall develop and maintain procedures for recording, reporting, tracking and resolving any data transfer, hardware, software and DDS issues.

5.9 Ongoing LH Approval of Suppliers

Following approval to QRS-100, LH reserves the right to periodically audit the Supplier’s ongoing compliance.

5.10 Training Requirements

Regular training ‘needs and analysis’ shall be conducted for all functions to achieve and maintain minimum competency levels against QRS-100 requirements. Associated training records shall be updated and maintained for this topic.

Refer to Appendix 4 for training guidelines.

6 Annexes, Appendices and Forms

- Appendix 1 – Process Overview
- Appendix 2 – Sealed Data Transfer
- Appendix 3 – Example Sealed Data Plan Scope and Content
- Appendix 4 – Guidelines for Minimum Training Requirements for CATIA & DMFG Methodologies
## Appendix 1 – Process Overview

### Quality Approval of LH DMFG Subcontractors against QRS-100 Requirements

<table>
<thead>
<tr>
<th>Initial Engagement</th>
<th>Approvals</th>
<th>Follow up</th>
</tr>
</thead>
</table>
| **Specification Compliance** | - QRS-01  
- AWDMFG Series  
- QRS-100 | QRS-100 Inclusive of DMFG Compliance Matrix Specific Against Approval Scope | As Required |
| **SQA** | | | |
| **ICT** | | As Required | |
| **Procurement** | | | |

### Pre Requisites:

- F01 Request for Approval Supplier Portal
- Quality Approval to QRS-01
- AWDMFG021 Calla V5 Configuration
- NDA
- Scope Entry Level

### Assessment Audit:

- Submit Draft SDP
- Conduct Audit
- Firm-up SDP Specifics
- Agree Closure Plan
- Launch Closure Plan

### Closure Plan:

- Track Completion Against Timeline
- Co-ordinate Specialist Input
- Provide Authorisation to Proceed in advance of Approval
- Complete SDP

### Approval:

- Approve & Sign-off SDP & F01
- Scope Approval
- Update SAP
- Provide Authorisation to Proceed
- Schedule Follow up activities as required

### Follow-up:

E.g.: Part Number Specific PDR & CDR + Additional Design Inputs
Notes:

1. LH native CATIA shall be used for Inspection purposes, any conversion or change of LH native CATIA is not permitted
2. The Supplier must operate the release of CATIA specified in AWDMFG021
